

AGILE

Making elevator
systems more
intelligent & efficient

TK ELEVATOR
MOVES PEOPLE -
THE FUTURE OF
URBAN MOBILITY

This is AGILE - Makes traveling in your building more efficient

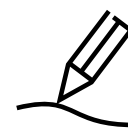

TK Elevator's Destination Control is designed to optimize traffic flow and improve performance, making your building instantly more efficient. Optimize your elevator system and allow our ergonomic kiosks and customized features to blend seamlessly and add to your building's contemporary look.

Whether it is AGILE's ability to efficiently assign people to the correct elevator, or to easily link elevators to your security system, AGILE is designed for large buildings with varying traffic patterns and complex architecture.

Elevate your building's performance

Intuitive AGILE Destination Control intelligently assigns passengers to elevators, reducing waiting and traveling time by 25%, while increasing capacity by 30%. Kiosk and fixture combinations further enhance passenger satisfaction and complement your building design.

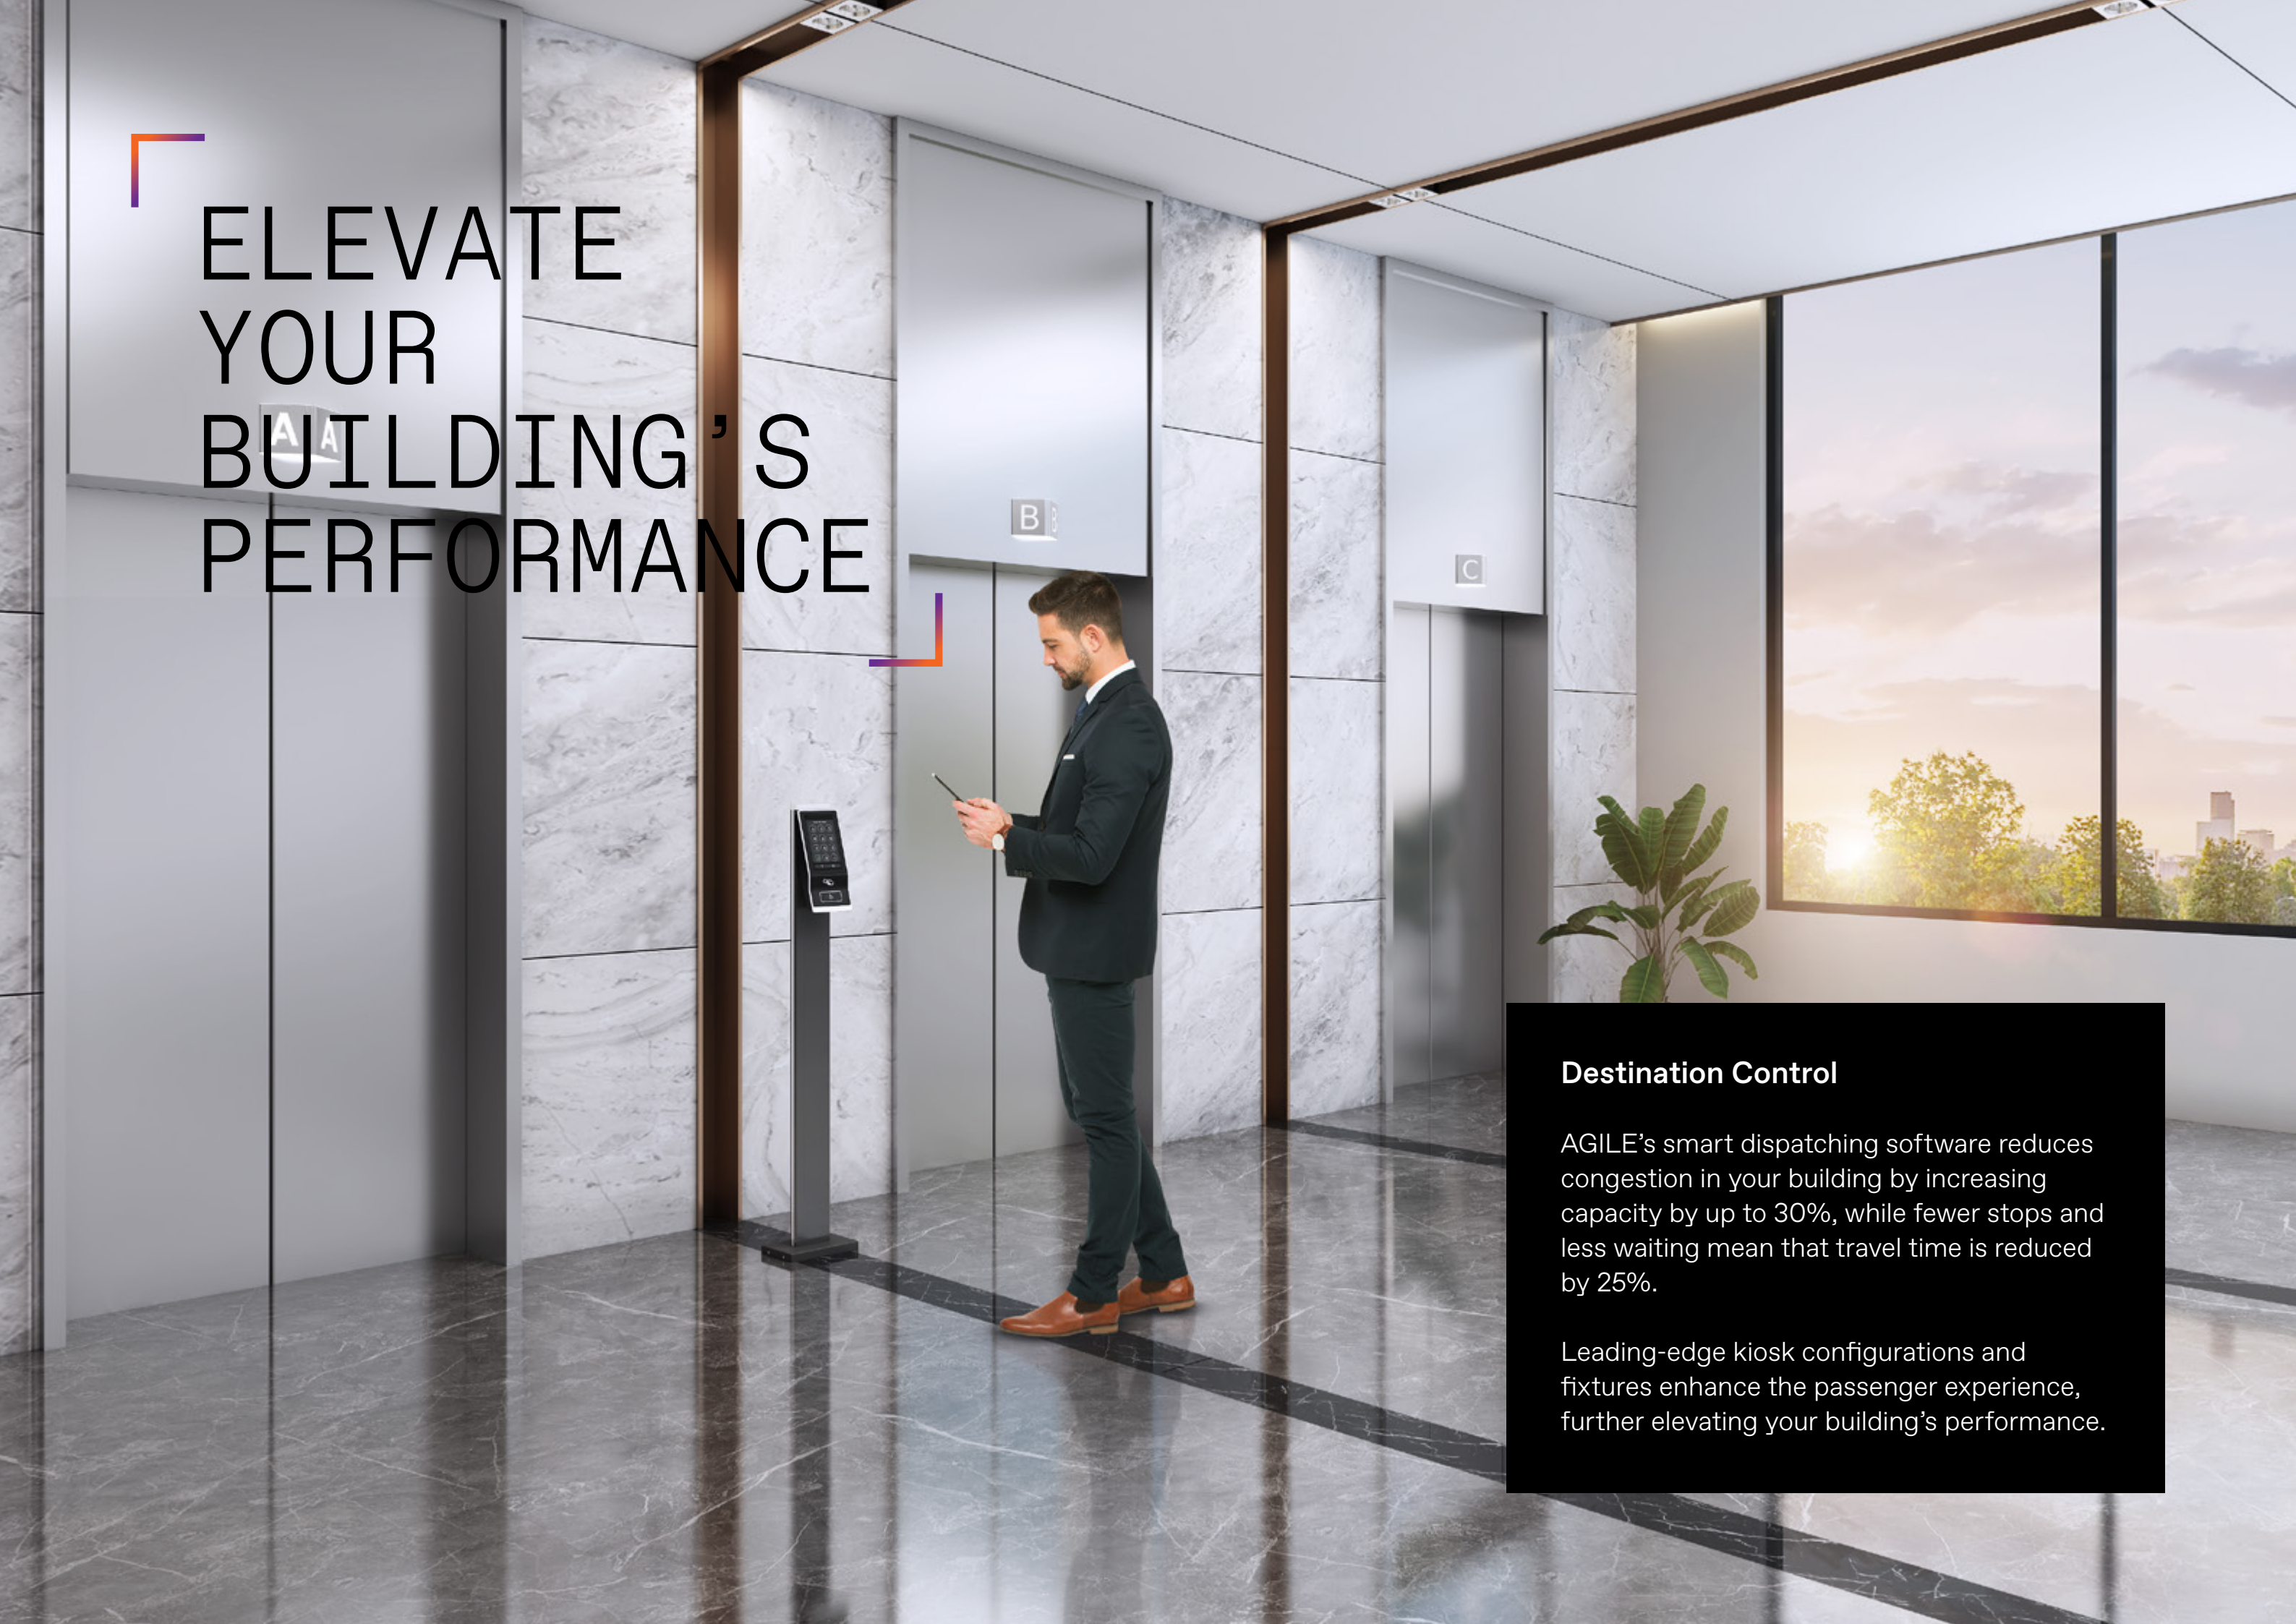

Enrich your building's experience

Use the AGILE Design Center to customize Destination Control kiosks to deliver a powerful first impression to passengers and delight tenants with tailored graphics and messages.

Enhance your building's security

AGILE Security Access smoothly interfaces with existing building systems and third-party databases.

ELEVATE YOUR BUILDING'S PERFORMANCE

Destination Control

AGILE's smart dispatching software reduces congestion in your building by increasing capacity by up to 30%, while fewer stops and less waiting mean that travel time is reduced by 25%.

Leading-edge kiosk configurations and fixtures enhance the passenger experience, further elevating your building's performance.

Make the smart move to greater efficiency

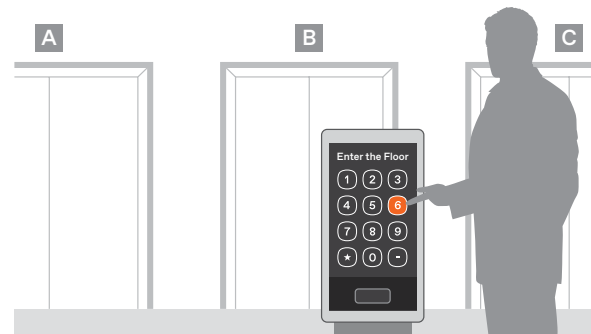

How it works

AGILE Destination Control intelligently groups passengers traveling to similar floors together. This technology is designed to reduce travel time for all tenants.

A traditional dispatching system assigns the next available elevator, however during that elevator journey, multiple stops can delay passengers going to other floors. With AGILE technology, fewer stops along the way mean greater efficiency and faster journeys.

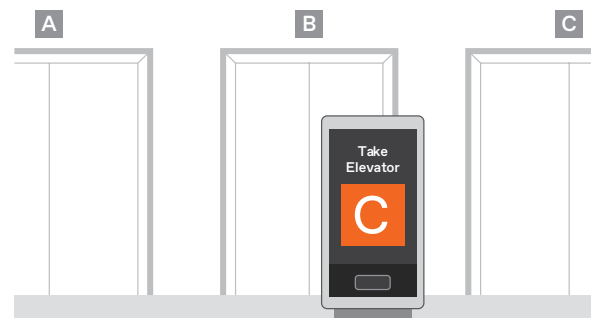

01

Passengers use the kiosk to select their floor.

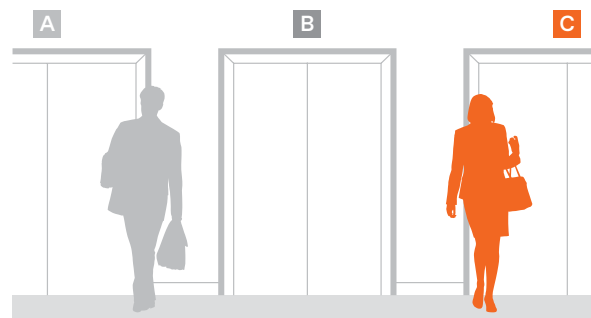

02

AGILE clearly directs each passenger to an assigned elevator.

03

Passengers board the assigned elevator that transports them to their destination fastest.

Improving the passenger experience

Traditional elevator operation

Passengers crowd into lobbies and push elevator buttons, which only register limited information - just single "up or down" requests. Then they board the first elevator to answer the call.

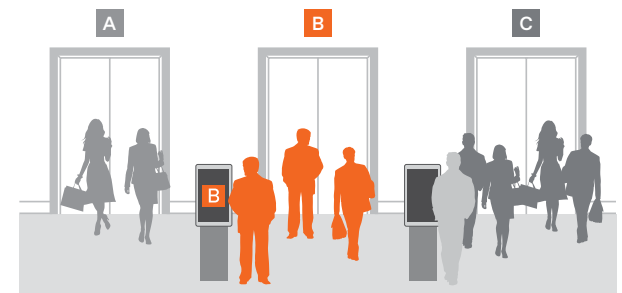

This leads to crowded cars, additional stops and passengers left behind to wait for the next elevator.

Operation with AGILE – Destination Control

Passengers use a kiosk to select their floor. The intelligent dispatching software collects car calls, analyzes their requests, gauges traffic demand and groups them based on similarity of destination.

AGILE Destination Control intelligently assigns passengers to elevators, reducing waiting and traveling time by 25%, while increasing capacity by 30%. The result is less crowding, fewer stops, efficient use of elevator capacity and more satisfied passengers.

Adapt our controls to fit your needs

AGILE – Destination Control is flexible enough to seamlessly adapt to new and existing elevators - even during a modernization.

AGILE - Destination Control

This configuration takes advantages of the full range of AGILE - Destination Control features and can be installed on elevator modernization projects or new installations.

- One or more AGILE kiosks on every floor
- No push-buttons inside the car
- Maximum efficiency
- Ideal for complex, high-traffic buildings
- Easily integrates with new or existing security system

AGILE - Destination Control Booster/Hybrid

If your building has high-traffic conditions on only a few floors, then AGILE - Destination Control is a cost-effective solution for modernizations as well as new installations.

- AGILE kiosks on the main floor or selected floor
- Push-buttons inside the car
- Improved efficiency in selected areas
- Ideal for buildings with high-traffic during peak hours on certain floors
- Easily integrates with new or existing security systems

*In high-traffic areas only, such as a lobby or cafeteria.

Kiosk & mounting options

An AGILE kiosk may be the first thing a visitor experiences inside the building, so make the first impression count. Each kiosk includes a range of inbuilt themes and an intuitive interface, which together ensure that AGILE adds to your building's premium by delivering a superior passenger experience.

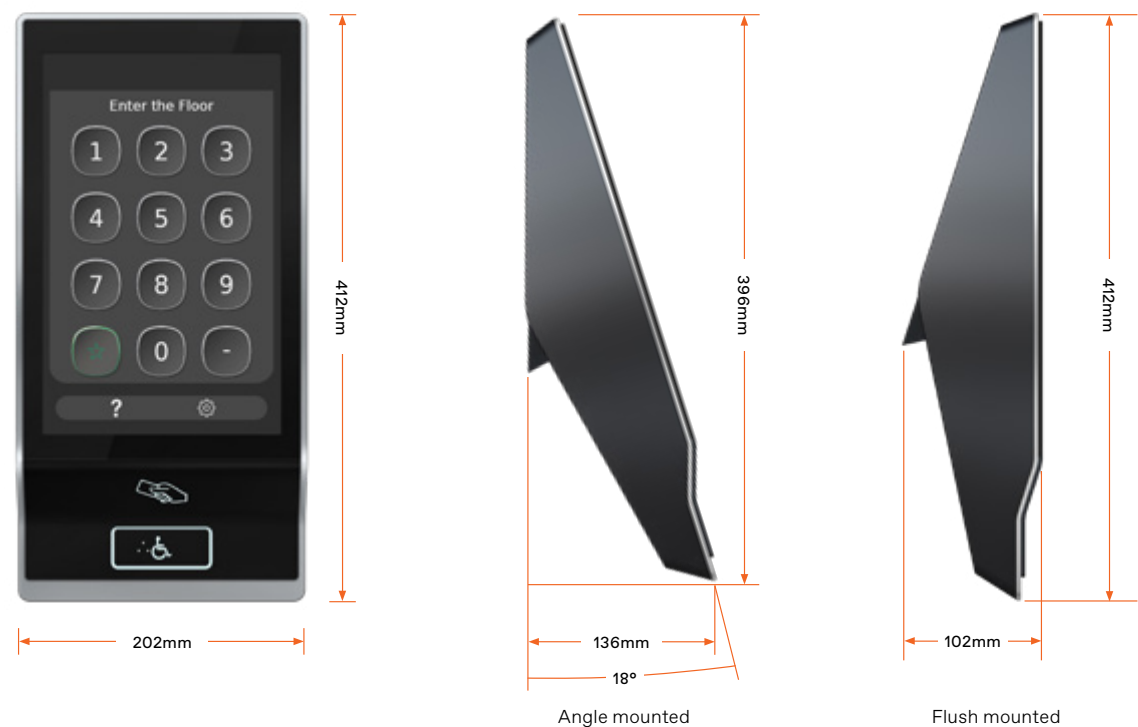

7" Kiosk DSC3A / DSC3A1 (with card reader)

Black anodized aluminum frames with frosted silver edges.

12.1" Kiosk DSC3B / DSC3B1 (with card reader)

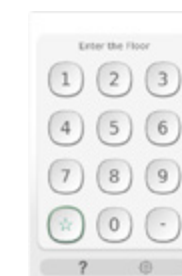

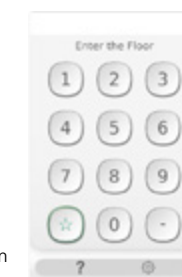

Black anodized aluminum frames with frosted silver edges.

Hall lantern

Hall lanterns to match your lobby.

ENRICH YOUR BUILDING'S EXPERIENCE

Design Center

AGILE Design Center is a software application that allows you to customize the kiosk screens that communicate with elevator passengers. Direct them to their destinations with clear graphics, brand identities and even custom messages.

You can do all this on a PC or remotely via handheld devices. Design custom screens one kiosk at a time, by elevator group or by floor.

Designed-in flexibility

AGILE provides the design flexibility you need to elevate your building's status to premium.

AGILE's clear, concise graphics make every kiosk's screen interface easy to use, directing every passenger quickly and smoothly to the designated car.

Kiosk screen customization using our AGILE Design Center is fast and easy: choose from existing pre-loaded themes and backgrounds or use personalized graphics, images or messages that reflect your building's brand identity. Customize just a selection of kiosks or all of them at once for a richer user and tenant experience.

Background

- Choose from a wide variety of pre-loaded backgrounds or solid colors
- Upload your own background image

Settings

- Auto brightness
- Brightness
- Volume
- Proximity sensor enabled or disabled
- Standby enabled or disabled
- Standby timeout
- Map timeout

Call allocation

Select display options for the call allocation screens that tell each passenger which elevator to use:

- Choose a simple elevator identification letter
- Select a floor mapping design that shows the elevator layout in your lobby or hall

Dock configuration

Select and arrange the icons that appear in the dock area based on options available in your elevator system:

- Help
- Language
- VIP
- Service
- "Code blue" or other icons

Sample screens show design options.

A modern building lobby with a curved turnstile in the foreground and a glass-walled elevator in the background. The turnstile is silver with a black top and a small screen. The elevator has glass doors and a wooden interior. The floor is polished and reflects the light. A large window in the background shows a city skyline.

ENHANCE YOUR BUILDING'S SECURITY

AGILE Security Access

A flexible security solution that ensures controlled access and a smooth passenger journey from entering the building to reaching the destination floor.

Maximize security, minimize hassles

A flexible security solution that ensures controlled access and a smooth passenger journey from entering the building to reaching the destination floor.

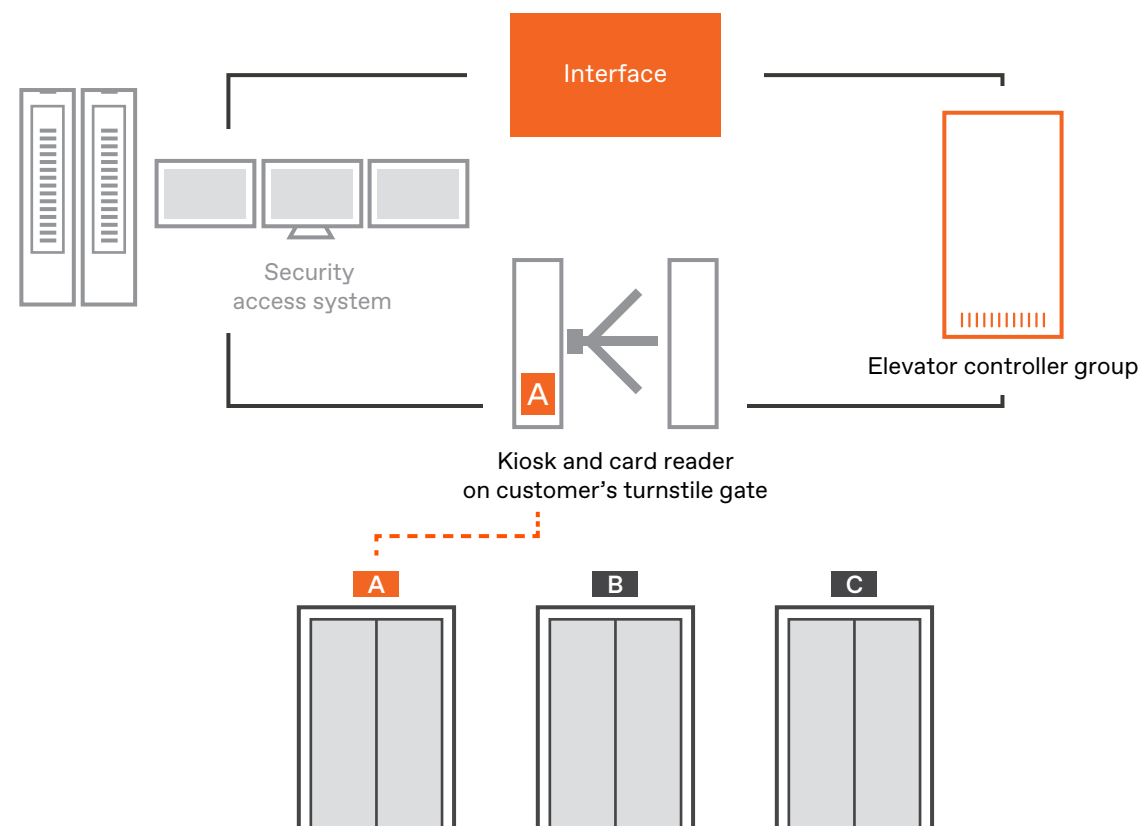

AGILE Security Access Solutions

Control access to elevators from your turnstiles with TKE full security access solution. This includes kiosks, card readers and an access control interface.

Alternatively, we integrate elevators with your existing building access via our interface.

As a part of the integrated system, AGILE Security Access provides greater control and smooth passenger mobility within the building:

1. A passenger swipes their card at the kiosk.
2. The AGILE Destination Control analyzes the request.
3. Assigns the elevator and simultaneously opens the turnstile gate.
